Stackable CO2 Incubators-Qty 10 Nos.

TECHNICAL SPECIFICATIONS:

Specifications of Stackable CO2 Incubators-Qty 10 Nos.

Single chamber with I/R CO2 sensor, with high temperature decontamination of inner chamber

- The incubator should have a capacity of app 165 L chamber with interior components constructed of electro polished stainless steel, with rounded corners, to minimize potential for unwanted contamination and simplify cleaning.
- The incubator should have a narrow space saving and easily stackable design with small relative footprint not to exceed 26" width, 36" height or 32" depth and reversible door swing, to conserve valuable laboratory space and maximize flexibility of placement within a variety of laboratory environments.
- Incubator should be direct air jacketed heating design featuring high quality thermal jacket insulation and THRIVE active airflow, fan assisted circulation, allowing recovery under 10 minutes of all parameters (temperature, CO2, and relative humidity) following a 30 second door opening.
- The incubator must have an integrated humidification design, a water reservoir that is in direct contact with a heated surface to maximize humidification efficiency as opposed to removable water pans which impede heat transfer. With recovery in under 10 minutes after a 30 second door opening
- Unit to have a water level sensor and alarm to alert user when humidification water refill is required.
- Humidity reservoir may be filled without the removal of shelves or cultures and easily drained through built-in copper drain.
- All control and measurement probes and sensors to be located inside the culture chamber to provide true and accurate values and foster faster parameter recovery times than is possible with sensors remotely located outside the chamber.
- The incubator should include an independent over-temperature protection function with independent back-up temperature sensor, to protect valuable cultures from potential damage in the event of an unexpected failure in the primary temperature control system.
- Incubator should have bulb less IR CO2 gas sensor technology, single beam, dual wavelength IR sensor with silicon MEMS emitter as IR source with internal auto calibration for longer, stable operation than a traditional IR sensor.
- An in-chamber HEPA filtered airflow system within the culture environment continuously filters the entire chamber air volume every 60 seconds.
- Incubator should comply to ISO 5 clean room air quality to be achieved within the culture chamber within 5 minutes following a 30 second door opening,
- Unit to have touch screen user interface, a bright, easy to read VGA control module display that provides interactivity by selection and viewing of all basic parameters. Access to daily operation
- The incubator should have on-board graphics capability, via the controller, enabling users to obtain historical performance by parameter or specified time periods to allow understanding of culture growth dynamics and usage patterns, enhancing research results.
- Touch screen interface to log and display all user interactions with the incubator (eg. door openings, parameter changes) facilitating the identification of important changes in the culture environment.
- The incubator should have automated chamber sterilization of overnight (under 12 hours) high temperature sterilization cycle of 180 °C that has been proven effective in contamination control against bacteria, molds, resistant bacterial spores and mycoplasma

Ref: INS/L-5425/2019-2020(Y)

Tender Notice No.004/2019-2020

- The unit should have high quality microbiological filters on all gas inlets, outlets and sample ports, to eliminate the potential of contamination entering the chamber from these points.
- The incubator should have a standard USB port with software for data downloading and reporting in Windows Excel format.
- Optional 4-20mA signal output should be available for interfacing with external data collection systems, which is ideal for GMP environments using external sensors and CFR-21 compliant software package.
- Incubator is CSA certified and CE marked, demonstrating that stringent testing procedures have been undertaken by independent agencies to provide the customer's best assurance of unquestioned quality and suitability for function.
- Incubator must have a feature to use up to six individual, autoclavable polycarbonate chambers that divide the incubator chamber, isolating individual cell types or projects. Individual Cell Lockers serve to quarantine cell types or different projects, offering enhanced protection for valuable cultures. Each Cell chamber should have dual 0.2 μm membrane filters that permit air circulation but exclude microbial contaminants. Independent tests demonstrate that microorganisms cannot pass between closed chambers. When one Cell chamber is opened, the remaining five Cell chambers should maintain the ideal growth environment for sensitive stem cells, primary cells, diagnostic tests etc.

3 Years Warranty from the date of Installation.
