### **SPECIFICATIONS FOR A DROSOPHILA INCUBATOR**

We need a Drosophila Incubator. This incubator will be used in the rearing of Drosophila. The rearing environment will cause developmental response of Drosophila.

1. The optimum rearing condition is a temperature of 25 C and 60% humidity.
2. The incubator will be used to rear drosophila under controlled temperature, humidity and CO2 concentrations, and to study the potential changes in growth and the effects on development in fruit flies.
3. The acids inherent in the rearing of many specimens or their food can quickly corrode a standard refrigeration evaporator. It is important for the drosophila growth chambers to have phenolic coated coils to protect coils from acidic secretion from drosophila.
4. Features of the proposed drosophila growth chamber to be evaluated include: ease of cleaning, ability to shut down all heat or cold producing equipment in the event of a malfunction, and capability to control temperature, humidity and CO2 concentration with multiple steps and

#### **Our specifications are:**

1. We need a chamber that has a suitable temperature and humidity range that offers the capability to simulate the optimum rearing environmental conditions of drosophila and the flexibility
2. Lighting System control that includes a cycle timer to simulate day/night conditions. Lights illuminate the shelf from above and are modular and waterproof.
3. Display of controlled parameters, such as temperature, allow user to visualize instantaneous set points and operating conditions.
4. Capacity should be 123 litres and should be provided with two shelves.
5. Automatic Return Buzzer Switch should be provided.
